

## PROJECT CONTROL SYSTEM

*The Project Control System is about project performance accountability. The integrated i-PCS provides an operational, tactical and high-level view of all capital projects through an easy to use management portal.*

*It introduces systematic budgeting aligned with the planning systems, continuous monitoring of project execution and expenditure control in support of full life-cycle asset management.*

### Key Features

- ✔ Co-ordinated Monitoring of all Projects
- ✔ Standardisation of feedback forms
- ✔ Timeous identification of project outliers
- ✔ Automatic marketing flyer for each project
- ✔ Optimised usage of funds
- ✔ Facilitates future budgeting
- ✔ Co-ordinated development/customization
- ✔ Reduced duplication/redundancy of data

*Various government and public institutions need a way to monitor and market their performance with regards to the spending of tax payers, national and international donors or any other source of funding. Further to this the gain by the community where these funds are implemented should be accountable and transparent.*

### CONTINUOUS FEEDBACK ON

- Web Based • Complete Project Control

- Management Dashboard • Spatial Project Reference
